How-To #:	10102816
Last Revised:	2010-12-13
Product(s):	MDX Provider for Oracle OLAP 2.0
Client Application(s):	Oracle AWM 11.2.0.1.0
Platform(s):	All supported platforms.

## Overview

This document outlines tips for using AWM to manage your cubes for Simba's MDX Provider for Oracle OLAP.

## Notes

1. Renaming a dimension in AWM will cause the name in the cube view to be out of sync. The renamed dimension needs to be removed from the cube and added back in order for the name to be updated.
2. Renaming a measure will also result in similar behavior. Correcting this requires the measure to be recreated because a measure cannot be removed from a cube.
3. The ordering of cube dimensions must be kept the same across the "Aggregation" and "Storage" tabs.
4. AWM is sensitive to locale settings and your changes may not be visible as a result. The readme and manual for the MDX Provider for Oracle OLAP have more information about this topic.
